DERON

HYDRAULIC PULLER

Removes Mid-Range Voith Fluid Couplings Without Damage

The Deron HP35 Hydraulic Puller allows removal of the mid-range Voith fluid couplings from their mounting shafts without damage to the couplings. The hydraulic jack of the HP35 requires 32 in³ of oil for a full 11 in. of stroke and develops up to 15 tons of pulling force at 10,000 psi. Three (3) threaded adapters, in a metal carrying box, are included in the puller kit with an optional hand pump available (hand pump shown). The Deron HP35 Hydraulic Puller is a valuable tool and will eliminate costly damage and down-time to your Voith couplings.

Features

- No Damage to Couplings
- Puller Kit Includes Three (3) Threaded Adapters
- Optional Hand Pump Available

| Adapter | Thread Size | Coupling Size |
|----------|-------------|-----------------|
| HP35-300 | R 1-1/4 BSP | 422-487 TV, TVF |
| HP35-400 | R 1-1/2 BSP | 562-650 TV, TVF |
| HP35-500 | R 1-3/4 BSP | 750-866 TV, TVF |
