# SLINGER DUSTER

**The Ultimate Design for One Man Rock Dusting**

The Deron SD2 Slinger-Duster is designed for ultimate rockdusting efficiency and performance. The unique design of this unit incorporates two (2) powerful direct drive hydraulic motors which provide power for the augers and dust flingers, while one (1) low speed, high torque hydraulic motor drives the agitators. Preset speed of the hydraulic motors provides the optimum discharge rate, while adjustable deflector plates allow the operator to easily control the discharge pattern of rockdust as required. Rugged design, heavy duty construction, skid mounted and open center frame are features of the Deron SD2 Slinger-Duster that enables easy loading in a scoop bucket. The maintenance free stainless steel hopper and rotating Z-shaped agitators provide for total hopper clean out. The Deron SD2 Slinger-Duster reduces operational costs and increases rockdusting productivity with ease of transport, loading and performance. The SD2 has a standard capacity of 2400 lbs. (Larger capacities are available, see optional capacity chart.)

## Features

- Stainless Steel Hopper
- Skid Mounted (Trailer Models Available)
- Rotating Z-Shaped Agitators
- Direct Drive Auger and Flinger
- Open Center (To Fit Over Ejector Cylinder)
- Protective Top Screen
- Adjustable Dust Deflector Plates
- Protective Bumper

## Specifications

- 2400 lb. Capacity (Larger Capacities Available)
- Oil Requirement: Min. 15 GPM @ 1800 psi

Optional Dust Capacity	Dim. "A"
2400 lbs.	24"
3500 lbs.	30"
5000 lbs.	38"
6000 lbs.	44"
7000 lbs.	49"
